

Employer & Provider Value-Based Partnership

The Community Care Alliance’s (CCA), Clinically Integrated Network (CIN) brings together independent hospitals and primary care providers to deliver seamless, high-quality care. By working together, we ensure communities receive comprehensive, efficient, integrated primary care, tailored to their unique needs. With a focus on innovation and patient-centered care, we strive to enhance health outcomes and overall satisfaction.

Through our partnerships with ProviDRs Care and the ACO National Network, the CCA is launching a community driven health plan that allows rural employers to take control of their healthcare costs and outcomes through a self-funded ACO. In partnership with CCA’s CIN providers, communities and local employers will enjoy the benefits of reduced healthcare expenses, improved employee health, and enhanced healthcare experience.

Traditional Carrier Network		PROVIDERS CARE Network 	
A fee-for-service payment model that does not provide opportunities for employers of all sizes to participate in shared savings models with providers.	 VALUE-BASED REIMBURSEMENT	Improves patient outcomes by paying providers for high-value care.	
Outdated and nontransparent reporting that has “proprietary” calculation of value-based payments.	 DATA MEASUREMENT	Provides complete transparency with claims and clinical data with transparent value-based payment reporting that allows providers to focus on high-quality patient care.	
Does not offer platform for providers and employers to work together without the insurance company.	 DIRECT CONTRACTING	Encourages and helps administer direct provider contracts with self-funded employers.	
Rigid plan offerings for small to medium size employers that provide little incentive to steer members to provider.	 STEERAGE	Facilitates in-network utilization and provider attribution through plan design, population management, and high-quality care coordination.	
Large carriers do not offer their value-based payment models to other payers or independent third-party administrators.	 MULTIPLE PAYERS	Offers the platform for providers to partner with any payer, including independent third-party administrators.	

Physician owned, ProviDRs Care Network provides the tools and resources for providers and integrated delivery systems to work directly with self-funded employers with as few as five employees and as large as 50,000 employees. Through the network, providers have access to data to help manage their populations and achieve greater shared savings through value-based payments tied to greater outcomes.
